

Jiale Shao(Kayce)

✉ shaojiale.gitignore@icloud.com | 🐙 [sshell](https://github.com/sshell) | 🌐 kayce.world

Education

Sichuan University

Bachelor of Engineering in Computer Science and Technology

2017/09 — 2021/07

Chengdu, Sichuan, China

Work Experience

Presence, Onsite

2024/09 — now

Senior Backend Engineer

Developing and maintaining all the backend services of Presence, a social media platform.

- **Architecture & Implementation.** Designed and implemented the overall technical architecture, ensuring scalable and efficient system solutions.

Pionex Crypto Exchange, Onsite

2023/06 — 2024/08

Senior Backend Engineer

Developing and maintaining the trading system of Pionex, a crypto trading platform.

- **Rebate System.** Designed and implemented the rebate system to support the rebate of trading fees to users (10m trades per month).
- **Virtual Account System.** Designed and implemented a system to reuse multiple trading accounts of external crypto exchanges to help reduce the cost of maintaining those accounts(10 -> 4).
- **Index Price System.** Participated in the development of the index price system to provide the real-time (usually less than 2s) index price of the crypto assets with high availability.
- **Account Settlement.** Participated in the development of the account settlement system to provide a high available / throughput account settlement service (DAU 100k).
- **Signature-based Access Control.** Participated in the development of the signature-based access control architecture for all requests.

Lark, Bytedance, Onsite

2021/07 — 2023/06

Golang Software Engineer

... and also

2020/06 — 2021/06

Golang Software Engineer Intern

Involved in the development of the ATS(Application Tracking System) of Lark.

- **Refactoring the Search System.** Reduced the query latency(from 500ms+ to 100ms+).
- **Auth System.** Developed an ABAC + RBAC auth system to handle the complex permission requirements(more than 100 different permissions in use) within the ATS.
- **MutiGeo Retrofit.** Participated in the retrofit of the system to support multi-geo(currently 2 geos) deployment, which addressed the data sovereignty issues of the company.

Misc

Telescope.nvim 🐙 [nvim-telescope/telescope](https://github.com/nvim-telescope/telescope) as maintainer for several nvim extensions

2023/07 — Now

Codewars 🐙 [kayce.gitignore](https://www.codewars.com/users/kayce.gitignore) | [Codewars](https://www.codewars.com/)

2024/10 — Now

- **Honor Percentile:** Top 0.733%, **Leaderboard Position:** #5,073

▸ **Rust:** 2 kyu / **Go:** 4 kyu

Skills

- **Programming Languages:** Go (Since 2020), Rust and Java (Vertx)
- **Middlewares:** Kafka, PostgreSQL, MySQL, Redis, MongoDB, OpenResty, etc.
